

Price Comparison of Commonly Prescribed Pharmaceuticals in Alberta 2016

ALBERTA COLLEGE *of*
FAMILY PHYSICIANS

Price Comparison of Commonly Prescribed Pharmaceuticals in Alberta 2016

Physicians have limited knowledge and poor access to information about medication costs and coverage.¹ In Canada, prescription medications are the second most costly component of health care upwards of \$29 billion per year.² These costs largely reflect the treatment of chronic medical conditions predominantly cared for by family physicians,³ including heart disease, high cholesterol, hypertension, diabetes, and depression.²

Drug store prescriptions make up 90% of prescription medication costs.⁴ About 30% of patients do not fill their prescriptions or take less than prescribed, up to 1/3 of the time because of affordability issues.^{5,6} In Alberta, trade name medications account for only 36% of prescriptions filled but account for 77% of prescription drug costs.⁷ On a national level, the top 100 most expensive prescription drugs, of roughly 3,000 available products,⁸ account for almost 45% of total prescription drug spending.⁹

Alberta prescribers' use of generic drugs (64%) is below the Canadian national average of 67%, and well below generic usage in the United States (86%).^{10,11} Generics have been shown to be clinically equivalent to trade name medications.¹² For example, in 38 cardiovascular trials only one found a difference between generic and trade name medications in a patient orientated outcome: trade name furosemide produced more diuresis than generic furosemide.¹²

Many medications within a drug class are therapeutically interchangeable. Newer medications are often derivatives of older products, frequently without proven clinical advantage, but at substantially higher cost. Many of these are not covered under provincial drug plans (see Table 1).

With this in mind, we continue to provide an annual update on the price of commonly prescribed medications in Alberta. We encourage prescribers to consider costs and medication coverage when choosing between therapeutically similar medications.

Other methods of improving costs of medications include combination products and splitting pills. Most combination products are similar in cost to the higher cost individual medication (ex. ACE Inhibitor/diuretic combos) and have been shown to increase adherence.¹³⁻¹⁴

Many medications are the same cost, irrespective of the dose and therefore prescribing a higher dose product and splitting it in half would decrease the drug cost by 50% (e.g. sildenafil).

Finally, we are unable to explain certain cost differences of therapeutically similar products. For example, Fluticasone/Salmeterol (Advair) is substantially more expensive than Budesonide/Formoterol (Symbicort). We again challenge prescribers to consider the relative cost differences between therapeutically interchangeable products.

Costs listed are primarily for the generic product (with generic name bolded) as provincial drug plans will generally only pay for the lowest cost formulation. Brand name prices (with brand name bolded) are for products still under patent protection. We also provide information on coverage by Alberta Blue Cross (BC) and Indian Affairs (IA) formularies and which products require Special Authorization (SA). Medications that are not covered (NC) are paid for entirely by your patients.

The prices, rounded to the nearest \$5, represent the entire retail cost of the prescription filled at a community pharmacy in Alberta, including markups and dispensing fee. This does not reflect what a patient would pay if covered under a drug plan, but rather the cost to an individual without coverage, or cost to the health system. The price reflects the maximum allowable dispensing fee charged under provincial regulations. Some pharmacies may charge less than that, but this tool allows for relative cost comparisons between medications in the same class or for treating the same condition.

This list is not exhaustive and we encourage you to contact your local pharmacist for information on medications not included that you use in your practice. This document is up to date as of January 1, 2016. We hope you find this document useful in your clinical practice.

Please forward any feedback, including cases where knowledge of medication cost or coverage made a difference in your patients or practice to: tony.nickonchuk@ahs.ca or mkolber@ualberta.ca.

What's New in 2016?

1. In Miscellaneous, we have added topical corticosteroids and head lice therapies
2. New generics since 2015: Moxifloxacin (Avelox), Pantoprazole magnesium (Tecta)

Table 1: Important Price Differences between Generic and Trade Name or Therapeutically Similar Products

Brand	Generic Name	90 Day Cost	Cheaper Alternative	90 Day Cost	90 Day Savings
Pristiq 50mg	Desvenlafaxine	\$280	Venlafaxine 75mg	\$45	\$235
Glumetza 2000mg QD	Metformin Long-Acting	\$245	Metformin 1000mg BID	\$30	\$215
Advair Diskus 250/50	Fluticasone/Salmeterol	\$335	Symbicort 200/6 (Budesonide/Formoterol)	\$150	\$185
Nexium 40mg	Esomeprazole	\$195	Rabeprazole 20mg	\$35	\$160
Vimovo 500/20mg BID	Naproxen/Esomeprazole	\$220	Naproxen 500mg BID Rabeprazole 20mg BID	\$55 + \$60	\$105
Coversyl 4mg	Perindopril	\$95	Ramipril 5mg	\$30	\$65

Generic Name	Brand name	Strength	Dosing	90 Day Cost (unless otherwise noted)	Coverage
RESPIRATORY					
Puffers differ in their 'doses' (puffs) per device, so comparing costs is difficult. The 90 day cost was calculated by: 1. Determining the total number of doses over 90 days (using the stated dosing frequency), 2. Multiplying by the calculated cost per dose, 3. Adding the dispensing fee and markup. This will not be exactly what patients pay for these products but allows for a more fair comparison between therapies. Brackets next to brand name indicate number of doses per device.					
Bronchodilators/Anti-cholinergics					
Salbutamol	Ventolin (200)	100mcg	4 pfs/d	\$20	BC/IA covered
Ipratropium	Atrovent (200)	200mcg	1 pf qid	\$50	BC/IA covered

About This Document

In the summer of 2011, Jayson worked as a pharmacy student with Tony. One day Dr. Kolber stopped by for a visit. He mentioned, in passing, “Boy, it would be great to have a list of common drugs and what they cost.”

As pharmacists, Tony and Jayson couldn’t agree more. We don’t mind calling busy, hard working doctors with deep clinical questions but always feel like bothers if it is about coverage limitations or price concerns. So, as preceptors so often do to students, Tony told Jayson to do all the grunt work. Then Tony took all the credit for the work and presented it as his own to Dr. Kolber. Dr. Kolber forgot he mentioned the idea but loved it nonetheless and proposed making it even bigger and bringing it to the ACFP. Thus began our collaboration.

Jayson has since become a fully licensed pharmacist so Tony does the grunt work and, as recompense, lists Jayson as a co-author. In sincerity, lots of consideration, research, and extensive editing goes into this document by all the authors, our professional colleagues, and the great team at ACFP.

Tina and Mike had been helping out with the document for a few years, but we had forgot to include them as authors.

About the Contributors

Michael R. Kolber, BSc, MD, CCFP, MSc
Family Physician

Mike is an Associate Professor in the Department of Family Medicine at the University of Alberta. He practices in Peace River and belongs to the University of Alberta Department of Family Medicine’s Evidence Based Medicine group. Mike contributes to Tools for Practice, presents at the ACFP’s CPD Roadshows, and is the Planning Committee Chair for the Practical Evidence for Informed Practice conference.

Tony Nickonchuk, BSc. Pharm.
Clinical Pharmacist

Tony practices pharmacy in Peace River as a hospital pharmacist at the Peace River hospital. He provides remote clinical support to numerous hospitals in northwestern Alberta and on-ward clinical support for the acute care unit in Peace River.

Jayson Lee, BSc. Pharm.
Clinical Pharmacist

Jayson graduated from University of Alberta in 2013 and now works as a clinical pharmacist at Pharmacare Fulfillment Centre in Edmonton. His main areas of clinical focus are in psychiatry and drug addiction.

Christina Korownyk, BSc, MD, CCFP
Family Physician

Tina is an Associate Professor in the Department of Family Medicine at the University of Alberta and is a member of the Department’s Evidence Based Medicine Group. She practices family medicine at the Northeast Community Health Centre in Edmonton. She also presents at the ACFP’s CPD Roadshows, and contributes to Tools for Practice and medical podcasts.

G. Michael Allan, BSc, MD, CCFP
Family Physician

Mike is a Professor in the Department of Family Medicine and Director of Evidence Based Medicine at the University of Alberta. He presently works at the Northeast Community Health Centre in Edmonton. He also contributes to Tools for Practice, presents at the ACFP’s CPD Roadshows, and participates in a weekly medical podcast.
